

**More
and more
businesspeople
are packing
it up.**

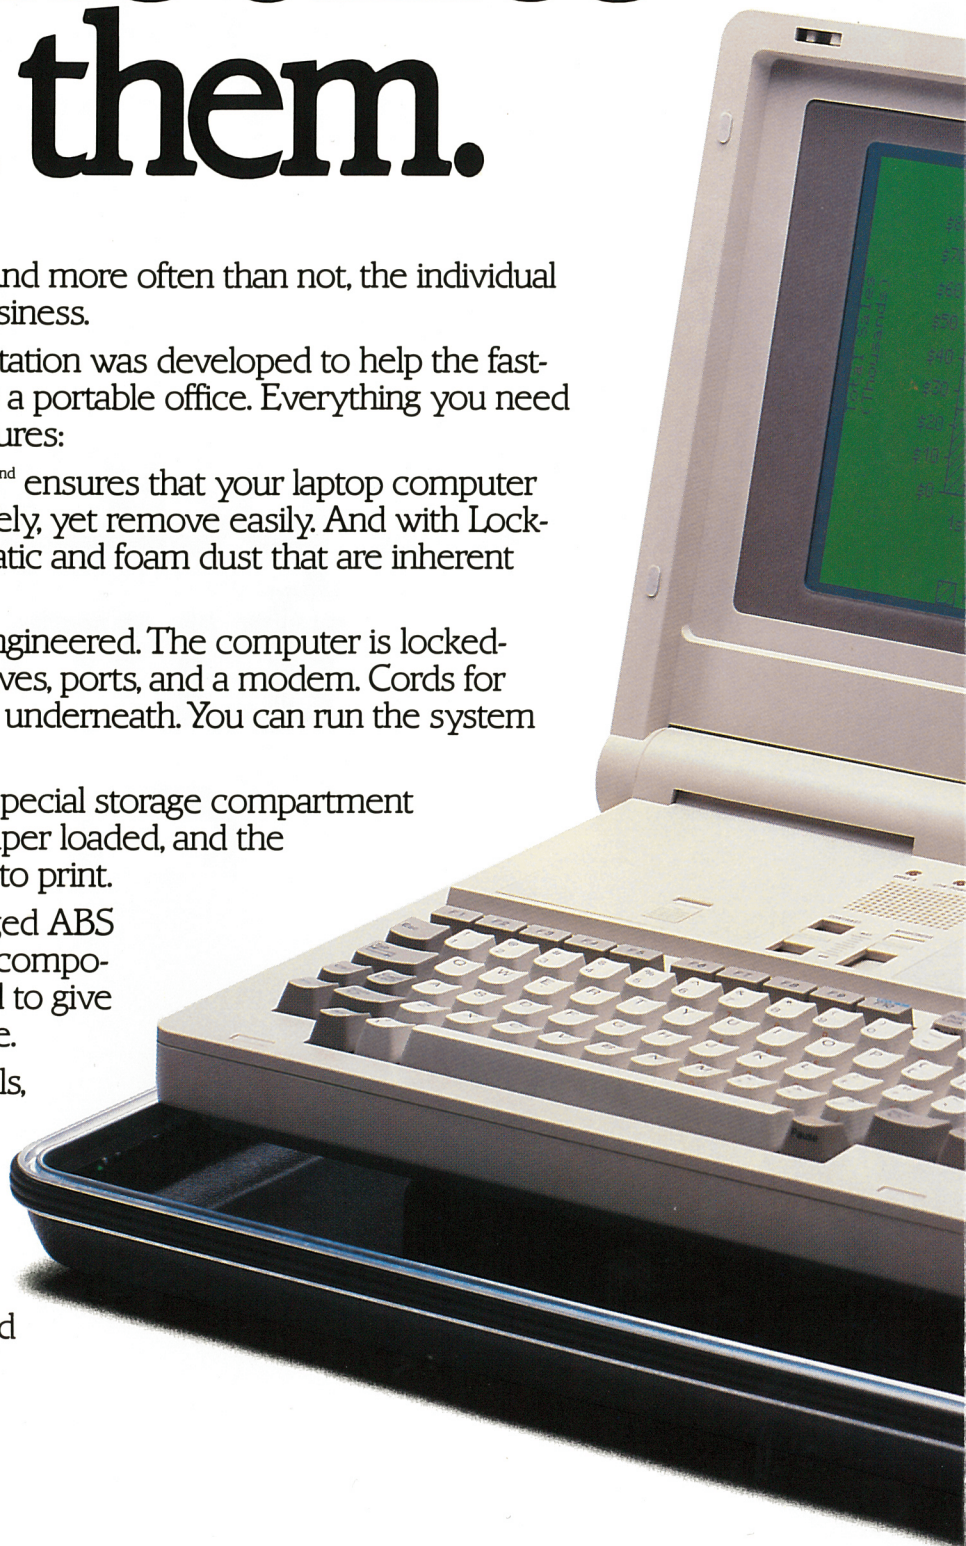

And taking the office with them.

Today, timing is everything. And more often than not, the individual who responds the quickest wins the business.

The *Gemini I* portable workstation was developed to help the fast-paced executive stay on top. *Gemini I* is a portable office. Everything you need is right there. Here are some of the features:

- Our exclusive *Lock-Down System*^{pat. pend} ensures that your laptop computer and Diconix 150 printer will travel safely, yet remove easily. And with Lock-Down you'll avoid the problems of static and foam dust that are inherent with foam padded cases.
- The working section is intelligently engineered. The computer is locked-down to allow easy access to disk-drives, ports, and a modem. Cords for the computer and printer tuck neatly underneath. You can run the system on either AC power or a battery.
- Paper feeds to the printer through a special storage compartment underneath the printer stand. With paper loaded, and the printer cabled, you'll always be ready to print.
- The outer shell is constructed of rugged ABS plastic. We designed it to give critical components the protection they require, and to give you the professional image you desire.
- There are storage sections for manuals, diskettes, pens, and business cards.
- The case lid is detachable, for easy computer presentations.
- A padded shoulder strap tucks away in the case lid, and snaps on when needed. You'll also find a padded handle for comfort.

As you can see, the *Gemini I* is a no-nonsense business tool. It gives you what you need, where you need it. It's the best system for the businessperson who wants both function and form.

Combining the demands of business on the road with the computer age is challenging. For those who adapt, it's a time of great opportunity. For those who don't, a time of frustration. Maybe it's time for you to pack-it-up. With a *Gemini I*.

GEMINI
