Summary of Amendments

In addition to minor clarifications and corrections, the following significant changes are included:

- In Chapters 6 and 10, the instruction-length code set when PROGRAM RETURN recognizes a space-switch event and loads an invalid PSW is changed from "1" to "unpredictably 0 or 1."
- In Chapter 10 and Appendix D, the move-with-source-or-destination key facility is changed from an optional facility to part of basic ESA/370.

Note: Please file this cover letter at the back of the manual to provide a record of changes.
