

## PT-210

# Portable Data Terminal Operation Manual

CUSTOM MANUFACTURED FOR RADIO SHACK, A DIVISION OF TANDY CORPORATION

#### **SERVICE POLICY**

Radio Shack's nationwide network of service facilities provides quick, convenient, and reliable repair services for all of its computer products, in most instances. Warranty service will be performed in accordance with Radio Shack's Limited Warranty. Non-warranty service will be provided at reasonable parts and labor costs.

Because of the sensitivity of computer equipment, and the problems which can result from improper servicing, the following limitations also apply to the services offered by Radio Shack:

- 1. If any of the warranty seals on any Radio Shack computer products are broken, Radio Shack reserves the right to refuse to service the equipment or to void any remaining warranty on the equipment.
- 2. If any Radio Shack computer equipment has been modified so that it is not within manufacturer's specifications, including, but not limited to, the installation of any non-Radio Shack parts, components, or replacement boards, then Radio Shack reserves the right to refuse to service the equipment, void any remaining warranty, remove and replace any non-Radio Shack part found in the equipment, and perform whatever modifications are necessary to return the equipment to original factory manufacturer's specifications.
- 3. The cost for the labor and parts required to return the Radio Shack computer equipment to original manufacturer's specifications will be charged to the customer in addition to the normal repair charge.

4800 W

#### LIMITED WARRANTY

#### CUSTOMER OBLIGATIONS

CUSTOMER assumes full responsibility that this Radio Shack computer hardware purchased (the "Equipment"), and any copies of Radio Shack software included with the Equipment or licensed separately (the "Software") meets the specifications, capacity, capabilities, versatility, and other requirements of CUSTOMER.

CUSTOMER assumes full responsibility for the condition and effectiveness of the operating environment in which the Equipment and Software

are to function, and for its installation

#### RADIO SHACK LIMITED WARRANTIES AND CONDITIONS OF SALE

For a period of ninety (90) calendar days from the date of the Radio Shack sales document received upon purchase of the Equipment, RADIO SHACK warrants to the original CUSTOMER that the Equipment and the medium upon which the Software is stored is free from manufacturing defects. THIS WARRANTY IS ONLY APPLICABLE TO PURCHASES OF RADIO SHACK EQUIPMENT BY THE ORIGINAL CUSTOMER FROM RADIO SHACK COMPANY-OWNED COMPUTER CENTERS. RETAIL STORES AND FROM RADIO SHACK FRANCHISEES AND DEALERS AT ITS AUTHORIZED LOCATION. The warranty is void if the Equipment's case or cabinet has been opened, or if the Equipment or Software has been subjected to improper or abnormal use. If a manufacturing defect is discovered during the stated warranty period, the defective Equipment must be returned to a Radio Shack Computer Center, a Radio Shack retail store, participating Radio Shack franchisee or Radio Shack dealer for repair, along with a copy of the sales document or lease agreement. The original CUSTOMER'S sole and exclusive remedy in the event of a defect is limited to the correction of the defect by repair, replacement, or refund of the purchase price, at RADIO SHACK'S election and sole expense. RADIO SHACK has no obligation to replace or repair expendable items

RADIO SHACK makes no warranty as to the design, capability, capacity, or suitability for use of the Software, except as provided in this paragraph. Software is licensed on an "AS IS" basis, without warranty. The original CUSTOMER'S exclusive remedy, in the event of a Software manufacturing defect, is its repair or replacement within thirty (30) calendar days of the date of the Radio Shack sales document received upon license of the Software. The defective Software shall be returned to a Radio Shack Computer Center, a Radio Shack retail store,

participating Radio Shack franchisee or Radio Shack dealer along with the sales document.

4000 Miles

C. Except as provided herein no employee, agent, franchisee, dealer or other person is authorized to give any warranties of any nature on behalf of BADIO SHACK

D. Except as provided herein, RADIO SHACK MAKES NO WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

F Some states do not allow limitations on how long an implied warranty lasts, so the above limitation(s) may not apply to CUSTOMER

#### LIMITATION OF LIABILITY

EXCEPT AS PROVIDED HEREIN, RADIO SHACK SHALL HAVE NO LIABILITY OR RESPONSIBILITY TO CUSTOMER OR ANY OTHER PERSON OR ENTITY WITH RESPECT TO ANY LIABILITY. LOSS OR DAMAGE CAUSED OR ALLEGED TO BE CAUSED DIRECTLY OR INDIRECTLY BY "EQUIPMENT" OR "SOFTWARE" SOLD, LEASED, LICENSED OR FURNISHED BY RADIO SHACK, INCLUDING, BUT NOT LIMITED TO, ANY INTERRUPTION OF SERVICE, LOSS OF BUSINESS OR ANTICIPATORY PROFITS OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OR OPERATION OF THE "EQUIPMENT" OR "SOFTWARE" IN NO EVENT SHALL RADIO SHACK BE LIABLE FOR LOSS OF PROFITS, OR ANY INDIRECT, SPECIAL, OR CONSEQUENTIAL DAMAGES ARISING OUT OF ANY BREACH OF THIS WARRANTY OR IN ANY MANNER AND CONSEQUENTIAL DAMAGES ARISING OUT OF ANY BREACH OF THIS WARRANTY OR IN ANY MANNER AND CONSEQUENTIAL DAMAGES ARISING OUT OF ANY BREACH OF THIS WARRANTY OR IN ANY MANNER ARISING OUT OF OR CONNECTED WITH THE SALE, LEASE, LICENSE, USE OR ANTICIPATED USE OF THE "EQUIPMENT" OR "SOFTWARE"

NOTWITHSTANDING THE ABOVE LIMITATIONS AND WARRANTIES. RADIO SHACK'S LIABILITY HEREUNDER FOR DAMAGES INCURRED BY CUSTOMER OR OTHERS SHALL NOT EXCEED THE AMOUNT PAID BY CUSTOMER FOR THE PARTICULAR "EQUIPMENT" OR "SOFTWARE" INVOLVED.

RADIO SHACK shall not be liable for any damages caused by delay in delivering or furnishing Equipment and/or Software.

No action arising out of any claimed breach of this Warranty or transactions under this Warranty may be brought more than two (2) years after the cause of action has accrued or more than four (4) years after the date of the Radio Shack sales document for the Equipment or Software, whichever first occurs,

Some states do not allow the limitation or exclusion of incidental or consequential damages, so the above limitation(s) or exclusion(s) may D not apply to CUSTOMER

#### RADIO SHACK SOFTWARE LICENSE

RADIO SHACK grants to CUSTOMER a non-exclusive, paid-up license to use the RADIO SHACK Software on one computer, subject to the following

Except as otherwise provided in this Software License, applicable copyright laws shall apply to the Software.

Title to the medium on which the Software is recorded (cassette and or diskette) or stored (ROM) is transferred to CUSTOMER, but not title to 8.

C. CUSTOMER may use Software on one host computer and access that Software through one or more terminals if the Software permits this function

CUSTOMER shall not use, make, manufacture, or reproduce copies of Software except for use on one computer and as is specifically D provided in this Software License. Customer is expressly prohibited from disassembling the Software. CUSTOMER is permitted to make additional copies of the Software early for backup or archival purposes or if additional copies are required in

E. the operation of one computer with the Software, but only to the extent the Software allows a backup copy to be made. However, for TRSDOS Software, CUSTOMER is permitted to make a limited number of additional copies for CUSTOMER'S own use. CUSTOMER may resell or distribute unmodified copies of the Software provided CUSTOMER has purchased one copy of the Software for each

one sold or distributed. The provisions of this Software License shall also be applicable to third parties receiving copies of the Software from CUSTOMER

G All copyright notices shall be retained on all copies of the Software

#### APPLICABILITY OF WARRANTY

The terms and conditions of this Warranty are applicable as between RADIO SHACK and CUSTOMER to either a sale of the Equipment and/or Α. Software License to CUSTOMER or to a transaction whereby RADIO SHACK sells or conveys such Equipment to a third party for lease to

The limitations of liability and Warranty provisions herein shall inure to the benefit of RADIO SHACK, the author, owner and/or licensor of the Software and any manufacturer of the Equipment sold by RADIO SHACK В.

#### STATE LAW RIGHTS

The warranties granted herein give the original CUSTOMER specific legal rights, and the original CUSTOMER may have other rights which vary from state to state

## Introduction

The PT-210 is a portable data terminal that links you to a "host" computer which may be either hundreds of miles away or in the same room.

To communicate with a Host that is some distance away, connect the PT-210 to a telephone through the Terminal's built-in acoustic coupler. Or you can install the optional/extra PT-210 RS-232C Interface (Radio Shack Catalog Number 76-1002) and connect the Terminal to a direct-connect modem such as the TRS-80 Modem I (26-1172), the auto-dial/answer Modem II (26-1173), or the high-speed, direct-connect DC-1200 Modem (76-1005).

With the RS-232C Interface installed, you can also connect the PT-210 to a host computer directly.

The PT-210 communicates with the host computer in ASCII code through a standard keyboard. For "hard-copy" output, the PT-210 uses an ultra-silent, thermal printer.

Other special features of the PT-210 include a:

- 53-key keyboard that can be reconfigured to a 13-key numeric pad and which conforms to standard data terminal keyboard format.
- Thermal printer which uses 8 1/2" thermal paper for "hard-copy" output.
- Selectable baud rate and parity.

## 1/ What is a Data Terminal?

There are three parts to a terminal:

- The Keyboard, where you enter data.
- The Printer, where the data is displayed in visible form.
- The Input/Output Channel, where the Terminal communicates with the Computer.

When you cannect a PT-210 to a power source and set the Power Switch to ON, nothing really happens unless the Terminal is connected to a "Host" computer. The Host is the controlling computer. Consequently, the operation and capabilities of your Data terminals are limited only by the limitations of the Host Computer — your Terminal can only do what the Host lets it do and no more! For instance, your PT-210 cannot store programs or data itself, but it can access information stored by the Host System.

Note that different Host Systems do not operate the same. In fact, they may even recognize keys differently. If you press a key on the Terminal when it is connected to one Host, the reaction may be totally different than when you press the same Terminal key when it is connected to a different Host! In other words, the specific operation of your PT-210 depends upon the Host that is in control. Consequently, good Data Terminals (like the PT-210) must be designed to operate with a variety of different Hosts.

#### Where is the Host Computer?

381

The Host computer may be located near the PT-210 (directly connected through the optional RS-232C Interface), or it may be hundreds of miles away and connected to your Terminal via the built-in acoustic coupler (or a modem) and telephone lines.

#### Can a PT-210 Communicate with Another PT-210?

Yes, two PT-210's can communicate (e.g., you and another PT-210 user can "talk" by typing on the keyboard), but that's all they can do. They can't process or store any information unless they're connected to a Host.

## 2/ Description of the PT-210

Before you begin using the PT-210, it's important that you become familiar with it. This section will describe the PT-210 and it's special function keys. However, remember the description of a particular key (e.g., what it does) may differ from Host to Host.

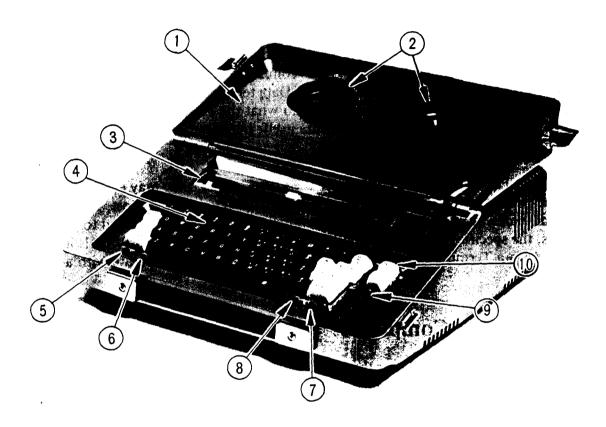

Figure 1. PT-210 (Front View)

- ① Top Cover. Be sure this Cover is closed and latched before you move the PT-210. You'll have to open the Cover to gain access to the Acoustic Coupler but close it to gain access to the Rear Compartment.
- 2 Acoustic Coupler. Place the phone headset into this modem (phone cord to the left) once you've dialed the Host by telephone and it has "answered" the call.
- 3 Print Head. The Print Head moves to the left and right as printing occurs. Do not print without paper in the PT-210. Use only Radio Shack Thermal Paper (76-1003) which is compatible with your Terminal.
- 4 **Keyboard.** The standard, typewriter-styled Keyboard can be "switched over" for 13-key applications (See Figures 4 and 5.)
- (5) Numeric Switch. Set this Switch to ON when you want to re-define the keyboard for 13-key use. use.

- 6 **POWER On Indicator.** This red Indicator will light up when the PT-210 is properly connected and the Power Switch is set to ON.
- ② CARRIER Indicator. This green Indicator will illuminate when you've established communication with the Host.
- **ERROR Indicator.** This red Indicator will light up when a parity (odd or even) error is detected. You will have to reset the Terminal by turning the Power OFF, then back ON.
- ② Communications Protocol Panel. Before beginning communications with a Host, set these Switches to select baud rate (SPEED), duplex (HALF or FULL), and mode (ON-LINE or OFF-LINE).
- 10 PAPER ADVANCE Key. When you need to advance the paper, press this Key.

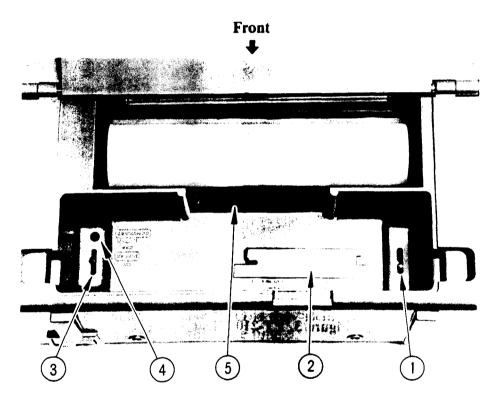

Figure 2. PT-210 (Rear Compartment)

Note that the Top Cover must be closed before you can gain access to the Rear Compartment. This compartment is also used to store the Power Cord.

- **1 PARITY Switch.** Set this Switch to EVEN, ODD, or NONE (no parity).
- **RS-232C Connector.** This Connector is an optional/extra item that allows you to connect the Terminal to a direct-connect modem or directly to a Host Computer. See Appendix B for specific details on installing and using the RS-232C option, including setting the COMM/TERM and RS232C/MODEM Switches.

- 3 POWER ON/OFF Switch. Set this Switch to ON before using the PT-210. After Switching Power OFF, wait at least 5 seconds before switching power on again.
- 4 Print Contrast Switch. If printing is too light, turn this Switch clockwise. If printing is too dark, turn the Switch counterclockwise. (Requires a small, phillips-head screwdriver.)
- (5) Paper Compartment.

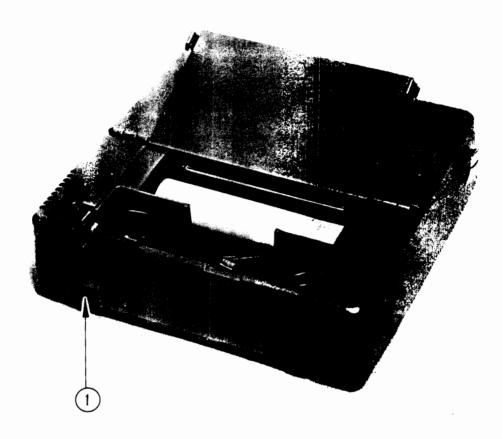

Figure 3. PT-210 (Rear View)

1) Power Cord Connector. Before connecting the supplied Power Cord to the Terminal, gently pull out on the protector to gain access to the Power Cord connector.

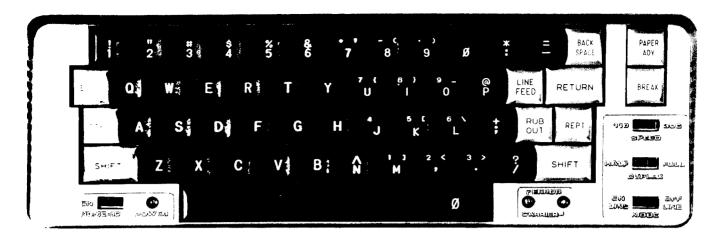

Figure 4. PT-210 Keyboard

The Keyboard (Which is patterned after a standard typewriter keyboard) can also be used as convenient 13-key numeric entry. In the normal operation mode, all keys are used normally. In Numeric Mode, 13 of the keys print numerals on symbols and the other keys are inactive.

The 13-key pad is activated when the NUMERIC Switch is set to ON. When this Switch is set to ON, only the keys with the small numbers in the upper-left corners are recognized. These keys are arranged like a standard 10-key pad. Note that the  $\boxed{5}$  (e.g., the letter K key) has a small, raised dot on its surface so you can find it easily.

When the NUMERIC Switch is set to ON, SPACEBAR is redefined as the zero (0) key. (That is, instead of pressing 0 to send a zero, press SPACEBAR).

#### CTRL

This is the "control" key. Holding <u>CTRL</u> down while pressing any other key will send a special message to the Host. For example, CONTROL G is the "Bell." To ring the bell (e.g., sound the PT-210 buzzer), press <u>CTRL</u> and <u>G</u> at the same time.

Note that if you press a key-combination (such as CTR1  $\sim V$ ), the ASCII code sent to the Host is different from pressing  $\overline{A}$  by itself. For a complete description of the ASCII codes sent by the PT-210, see **Appendix A**.

#### BACK SPACE

Pressing this key will backspace the Print Head (e.g., it moves the Print Head one space to the left so a character may be re-typed). The second character will overstrike the first.

#### RUB OUT

This is the delete key which is used to delete the character just sent. It sends ASCII the 127 to the Host and will echo  $\pm$  to the PT-210.

#### BREAK

This key generally means "interrupt." Pressing BREAK sends "continuous space" to the Host.

#### RETURN

This key is similar to the typewriter's carriage return and tells the Host to accept the data typed since the last carriage return. This key sends ASCII 13 (CTRL-M) to the Host and is the Carriage Return. Most Host Computers will echo both a Carriage Return and a Line Feed (ASCII 10) when this character is received.

#### ESC

When you press ESC, the next key you press will have a special meaning. This enables the Keyboard to be used as a bank of switches to perform operations such as turning printers off and on. The ESC key sends ASCII 27 to the Host.

#### LINE FEED

Pressing this key usually causes the Host to move down one line without returning it to the left margin. This key sends ASCII 10 to the Host.

Caution: Do not press any printable character keys unless paper is loaded.

Damage to the printhead and platen could result.

## 3/ Setting-Up the PT-210

Before using the PT-210, place the Terminal on a level, solid surface and be sure the paper is properly loaded.

## Connecting the PT-210 to a Power Source

The Power Cord is stored in the Rear Compartment. To connect the PT-210 to a power source:

- 1. Remove the cap which covers the power connector on the rear of the PT-210.
- 2. Insert the appropriate end of the Power Cord into the connector.
- 3. Connect the other end of the Cord to a 115VAC, 60Hz wall-outlet or approved power strip (such as the Radio Shack Plug-In Power Strip, 61-2610, or Automatic Power Controller, (26-1429).

Electrical requirements for the PT-210 are listed in the Specifications section of this manual and on the Terminal itself.

#### **Paper Loading**

Do not use any paper except paper which is included with the PT-210. When you need to order more paper, request Catalog Number 76-1003 from your Radio Shack Computer Center or Computer Department.

Before loading the paper, remove the wrapper from the paper roll. If the end of the paper is not squarely at right angles to the feed direction, cut it square with scissors (or cut the corners at an angle to make paper feeding easier. See Figure 6).

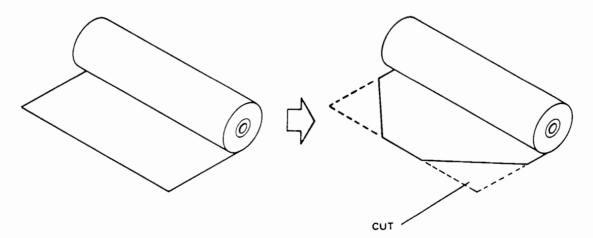

Figure 6. Preparing Paper for Loading

### To Load Paper into the PT-210:

- 1. Open the Rear Compartment Cover and set the paper in the Paper Compartment.
- 2. Set the POWER ON/OFF Switch to ON.
- 3. Feed the paper over the Tension Roller (1) and down through the Paper Slot (2) and Platen (3) until it appears behind the plastic window.

The paper will not slide behind the Print Head because the Head is pressed against the Platen.

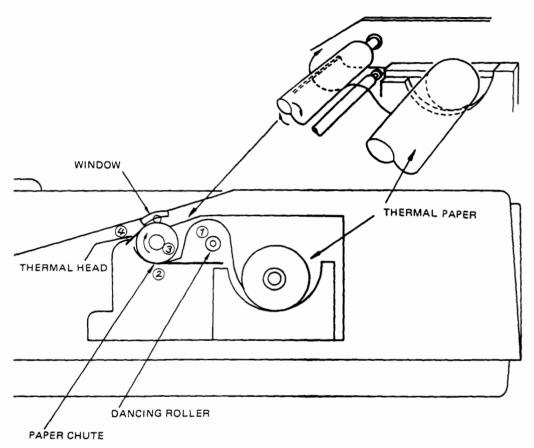

Figure 7. Paper Flow

4. Press PAPER ADV until the paper feeds behind the Print Head and out from under the plastic window.

#### Connecting the PT-210 to a Host Computer

There are several ways to connect the PT-210 to a Host Computer. For details on making the connections, see the section of this manual entitled Using the PT-210.

## 4/ Using the PT-210

Set the POWER Switch to ON. The red POWER Indicator will illuminate and the Print Head will move to the left margin.

If the Print Head is already at the left margin, it will not move. If the Host is sending a Cursor (e.g., an indicator that tells you the current position the Host is using), it will be printed although you probably won't be able to see the Cursor until the Print Head moves.

#### **Setting the Communication Protocol Switches**

Before beginning communications, the communication protocol (e.g., baud, parity, etc.) between the Host and your PT-210 must watch. Find out what protocol the Host is using, then set the PT-210 accordingly (or vice versa).

Three protocol switches on the PT-210 are located on the Communications Protocol Panel on the Keyboard. They are:

- SPEED Switch which selects either 110 or 300 baud.
- DUPLEX Switch which selects either HALF or FULL Duplex.
- MODE Switch which selects the Transmission Mode (ON-LINE or OFF-LINE).

The other Protocol Switch (PARITY Select) is located inside the Rear Compartment.

#### **PARITY Select Switch**

The PARITY Select Switch is located on the left-side of the Paper Holder in the Rear Compartment. You can set this Switch to:

- EVEN Parity.
- ODD Parity.
- NONE (No Parity).

This Switch determines whether or not the PT-210 will send a parity bit with the transmitted word. It also activates parity checking when the PT-210 is receiving characters.

If a parity error occurrs, the red ERROR Indicator comes on and backward question mark (?) will be printed.

If NONE (No Parity) is selected, parity is not sent or checked and the ERROR Indicator will not illuminate under any conditions.

#### **BAUD** Select Switch

The PT-210 is designed to comunicate at either 110 or 300 baud ("bits per second"). Find out the baud rate of the Host System, then set this Switch to:

- 110.
- 300.

When the PT-210 is set to 110 baud, the Printer will operate at 10 characters per second; if set to 300 baud, the Printer will print at 30 characters per second.

#### **DUPLEX Select Switch**

The PT-210 can operate in two duplex modes:

- Full.
- Half.

If the Host computer "echos" every character it receives from the PT-210, then set this Switch to FULL. You will see the received character and know that it was correctly received and echoed by the Host Computer.

If the Host Computer does not echo characters, you must select HALF Duplex to see what you are typing. In HALF Duplex Mode, the PT-210 (rather than the Host) prints the characters on the paper.

If you set the PT-210 to Half Duplex and the Host is echoing the character, you will see two of each character on the Paper — one character will be from the PT-210 and the other echoed from the Host.

If this happens and you want to see only one character, simply set the Switch to FULL.

## **MODE Select (OFF-LINE or ON-LINE)**

This Switch must be set to ON-LINE before you can begin communication with the Host System.

If this Switch is set to OFF-LINE, two things can happen:

- The Self-Test can be performed.
- The PT-210 can be disconnected from the telephone line and used like a portable typewriter.

It's a good idea to run the Self-Test before establishing communications with a Host Computer. To run the self-test:

- Set the MODE Switch to HALF.
- 2. Set the SPEED Switch to 300.

3. While pressing the REPT key, set the Power Switch to ON.

The PT-210 should begin printing its entire character set and will continue until you set the Power Switch to OFF.

To use the PT-210 as a portable typewriter, set the MODE Switch to OFF-LINE and the NUMERIC Switch to OFF. Then simply type on the Keyboard like you would a normal typewriter. However, to perform a carriage return, you'll need to press RETURN (to return the Print Head to the left margin) and LINE FEED (to advance to the next line).

#### Using the PT-210 with a Host Computer

You can connect the PT-210 to a Host Computer via the built-in acoustic coupler or via the optional RS-232C Interface. For details on using the PT-210 optional RS-232C Interface, see Appendix B.

In either instance, you'll have to set the Switches on the Communication Protocol Panel to match the Host. This must be done before you begin communications with the Host.

- 1. Set all the Switches as specified by the Host Computer. The MODE Switch should be set to the ON-LINE position.
- 2. Dial the telephone number of the Host Computer.
- 3. The Host will answer the phone and send a high-pitched tone. This is the Answer Carrier.
- 4. When you hear the Answer Carrier, immediately place the phone handset into the rubber acoustic cups (with the cord on the left).
- 5. The green CARRIER Indicator should illuminate.
- 6. Begin the log-on procedure the Host requires. Each Host will have its own requirements.
- 7. If the green light goes out, you have "lost carrier". This means that the Host has hung up. You will have to start over at Step #2.

To disconnect from the Host, follow the Host's procedures for signing off.

If you have repeated errors on power-up because of **outside** noise interference, set the MODE Switch to OFF-LINE before dialing the telephone number of the Host Computer. Set the Switch to ON-LINE after placing the handset into the acoustic **cups**.

## 5/ Care and Maintenance

Your PT-210 is a reliable device which should provide you with years of trouble-free service. However, the first thing to do in case of trouble is to see if the trouble is in the PT-210 or in the System.

#### The red Power on Indicator does not illuminate.

- Is the outlet "live"?
- Are you connected to a suitable source?
- Are the connections firmly made?

#### Incorrect or missing data through the acoustic coupler.

- Are the MODE, DUPLEX and SPEED Switches set correctly?
- Is the Host Computer on-line and sending a carrier tone?
- Is the telephone handset seated firmly into the rubber cups, with the Transmitter (the part you speak into) to the left?

#### Extra characters and missing characters.

• This is caused by noise on the phone line, someone picking up an extension phone, "Call Waiting" indicators, a PBX operator testing your line, etc.

#### The Printer does not print.

- Has some small object fallen inside the mechanism, causing it to jam?
- Do you need to adjust the printing Contrast?

#### Communication using the RS-232C Interface has problems.

- Is the RS-232C cable to the interface unit installed correctly?
- Are the RS232C/MODEM and COMM/TERM switches on the Interface Unit set correctly?

#### Hints and Tips...

- Be sure the parameters are correct for your System.
- Be sure to use the correct baud rate for the Host modem.
- Be sure the Host Computer has its RS-232C channel properly configured.

Note: Lower case letters are translated to uppercase equipments when received by the terminal.

## **Control Codes**

The PT-210 will transmit all 128 ASCII characters, and it recognizes four ASCII Control Codes.

| Control Code      | Explanation   |
|-------------------|---|
| CTRL-G (ASCII 7)  | Beeps the "bell" in the PT-210.   |
| CTRL-H (ASCH 8)   | Backspace. Moves the Cursor one column to the left.   |
| CTRL-J (ASCII 10) | Line Feed. Advances the paper one line vertically. The Cursor does not return to the left margin. |
| CTRL-M (ASCII 13) | Carriage Return. The Cursor moves to the left margin. A Line Feed daes not occur.                 |

Printing on the next line requires both a CTRL-M and a CTRL-J to be sent to the PT-210 by the Host.

## Appendix B/ RS-232C Interface (Optional/Extra)

## Installing the RS-232C Interface Board

Before installing the RS-232C Interface kit, be sure the PT-210 power is OFF.

- 1. Remove the lid which covers the RS-232C Interface slot in the rear of the PT-210.
- 2. Carefully insert the RS-232C Interface Card into the grooves on the sides of the hole. The Card will only go in one way.
- 3. Slide the card down the grooves until the plug seats firmly into the jack at the bottom. The DB-25 jack will protrude from the top of the hole. See Figure 8.

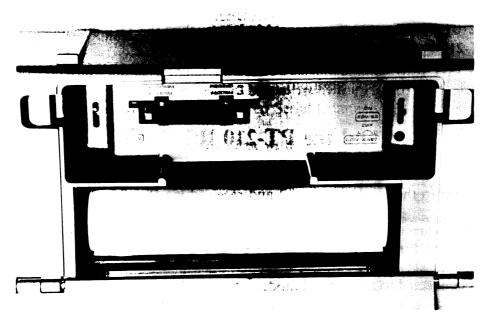

Figure 8. RS-232C Interface Card Installed

#### Using the RS-232C Interface

The RS-232C Interface connector has two switches:

- RS-232C/MODEM Select.
- COMM/TERM Select.

Before changing the switches, be sure the PT-210 Power is off.

If you are using the PT-210 built-in acoustic coupler to communicate with a Host, the RS-232C/MODEM Select must be set to MODEM (e.g., in the "up" position). In cases such as this, the setting of the COMM/TERM Select doesn't matter.

However, when you connect the PT-210 to an external device via the RS-232C Interface, set the RS-232C/MODEM Select to RS-232C (e.g., the "down" position). In this case, the setting of the COMM/TERM Select is very important.

- If the Host is a TRS-80 Model II, III, 16, or DT-1, set the PT-210 COMM/TERM Select to COMM (e.g., it must be in the "down" position).
- If the PT-210 is connected to an external Modem (such as the TRS-80 Modem I, II, or DC-1200), set the PT-210's COMM/TERM Select to TERM.
- If the Host is a non-Radio Shack Computer, set the PT-210 COMM/TERM Select to TERM (e.g., it must be in the "up" position).

#### Data Transmission and the PT-210 RS-232C

When the PT-210 is direct-connected to a Host Computer and the COMM/TERM Select is set to TERM, data is sent to the Host via Pin #2 and received via Pin #3.

When the PT-210 is direct-connected to a Host and the COMM/TERM Select is set to COMM, data is sent to the Host via Pin #3 and received via Pin #2.

If the PT-210 is connected to an external modem, the PT-210 acts as the terminal and data is sent via Pin #2 and received via Pin #3.

Note: When the PT-210 RS-232C/MODEM Switch is set to RS-232C, the setting of the DUPLEX Switch has no effect on communications.

#### Using the RS-232C to Connect the PT-210 to a Modem

- Connect a RS-232C Cable (26-1408) from the RS-232C Jack on the PT-210 to the RS-232C Jack on the modem.
- 2. Connect the modem to the telephone line, following the instructions in the modem operation manual.
- 3. Set the MODE Switch on the PT-210 to ON-LINE.
- 4. Set the MODEM/RS-232C Switch to RS-232C (press down).
- 5. Set the COMM/TERM Switch to TERM (up position). See the modem operation manual for more details.

#### Using the RS-232C Interface for Direct Connection

If you connect the PT-210 to the Host Computer directly, the Terminal and the Host are usually located in the same room or building.

The RS-232C Interface provides standard signals and can be used to connect the PT-210 to any on-site computer terminal facility. This includes the TRS-80 Model 16. If the Host is a TRS-80 Model II or 16, be sure to insert a Terminator Plug into any unused Serial Channels.

For direct connection, connect the PT-210 to the Host with a DB-25 RS-232C cable (26-1408).

- 1. Connect one end of the cable to the RS-232C Interface Jack on the PT-210.
- 2. Connect the other end of the cable to the Serial Channel on the Host System.

Follow the instructions from the Host System.

#### **RS-232C** Interface Specifications

Method: Asynchronous, serial by bit, serial by character.

Code: ASCII, 11 bits per character including parity, start, and two stop bits at 110 baud, 10 bits per character, one stop bit at 300 baud.

Parity: Odd, even, or none.

and the second s

#### Standard RS-232C Interface

| Signal | Function            | Pin # |
|--------|---------------------|-------|
|        |                     |       |
| PG     | Protective Ground   | 1     |
| TD     | Transmit Data       | 2     |
| RD     | Receive data        | 3     |
| RTS    | Request to Send     | 4     |
| CTS    | Clear to Send       | 5     |
| DSR    | Data Set Ready      | 6     |
| SG     | Signal Ground       | 7     |
| CD     | Carrier Detect      | 8     |
| DTR    | Data Terminal Ready | 20    |
|        |                     |       |

## Appendix C/ Glossary

ASCII — American Standard Code for Information Interchange.

**Baud Rate** — Rate data is being sent between a Terminal and a Host. Approximately equal to "bits per second".

Bell — The buzzer in the PT-210.

Carriage Return — Returns Cursor to column one of the same line.

Column — Horizontal spaces. The PT-210 uses 80 columns.

Default — The value a switch or parameter takes on if you do not specify a value.

Echo — The Host sends the character it just received immediately back to the PT-210. The returned character may or may not be printed.

Enabled — Turned on. Permitted to function.

Even Parity. — The number of bits in a character is counted. If the result is odd, the parity bit is set. Then the number of bits set will be even - hence even parity. On the receive end, the number of bits in the word is counted. The result is compared with the parity bit and if the result is odd and the parity bit is not set then the computer knows that an error has occurred.

Full-Duplex — Characters typed by the PT-210 are echoed by the Host system.

Half-Duplex — Characters typed on the PT-210 are not echoed by the Host system. The PT-210 will print each character in this mode.

Line Feed — The moves Cursor down one line without returning it to the left margin.

Odd Parity — Each time a character is sent, a parity bit is sent too. If the number of bits set in the character is even, then the parity bit is set, resulting in an odd number - hence odd parity.

When received, the number of bits set in the character is again counted and if an even number results then the parity bit must be set. If the parity bit is not set and the number of characters is even, the computer knows that an error in transmission has occured.

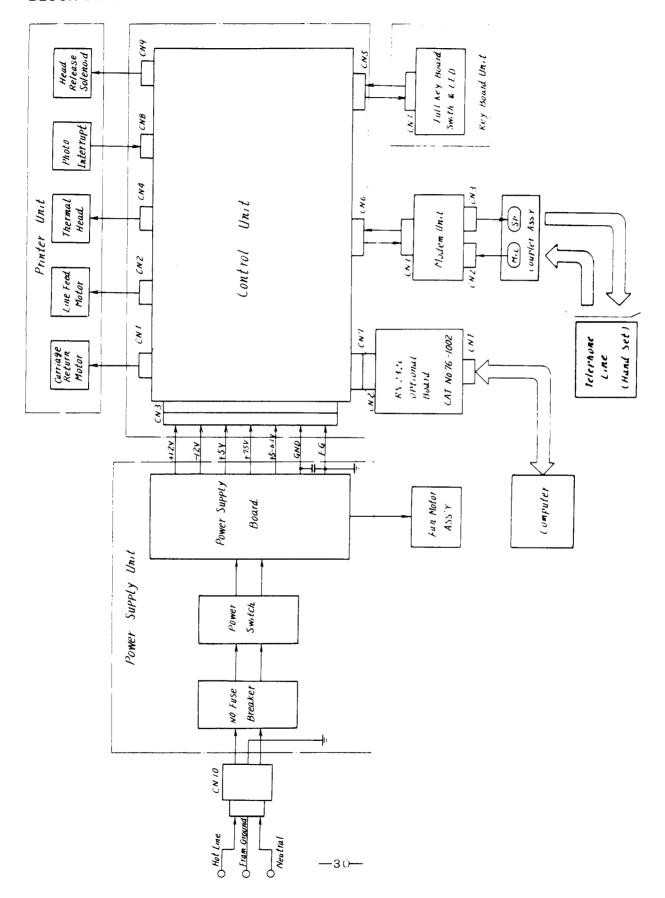

Parity — An error checking system.

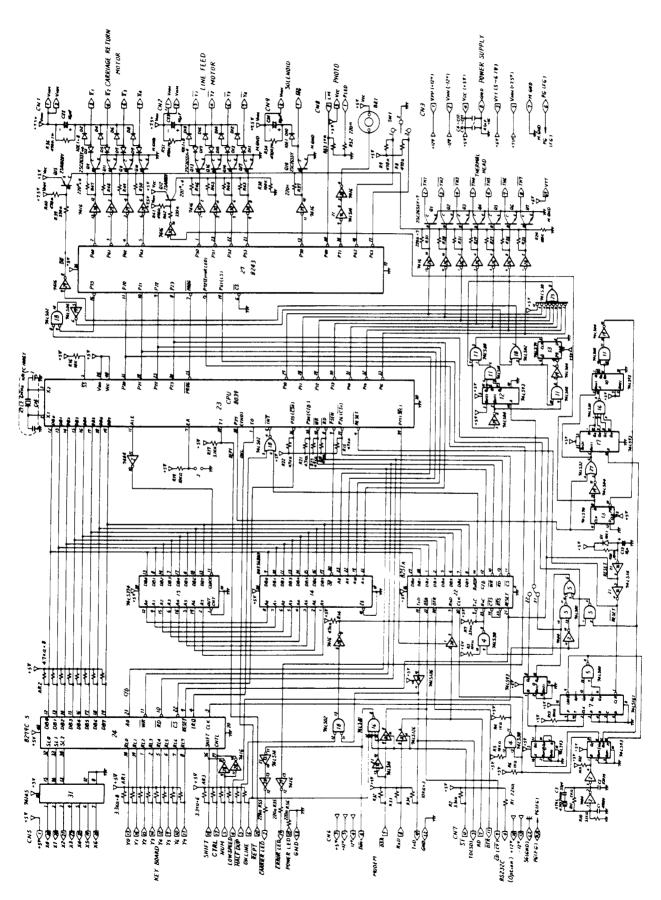

Serial — Data arrives one bit at a time through a single wire and 7 or 8 bits, set in a unique combination of voltage levels, define a character.

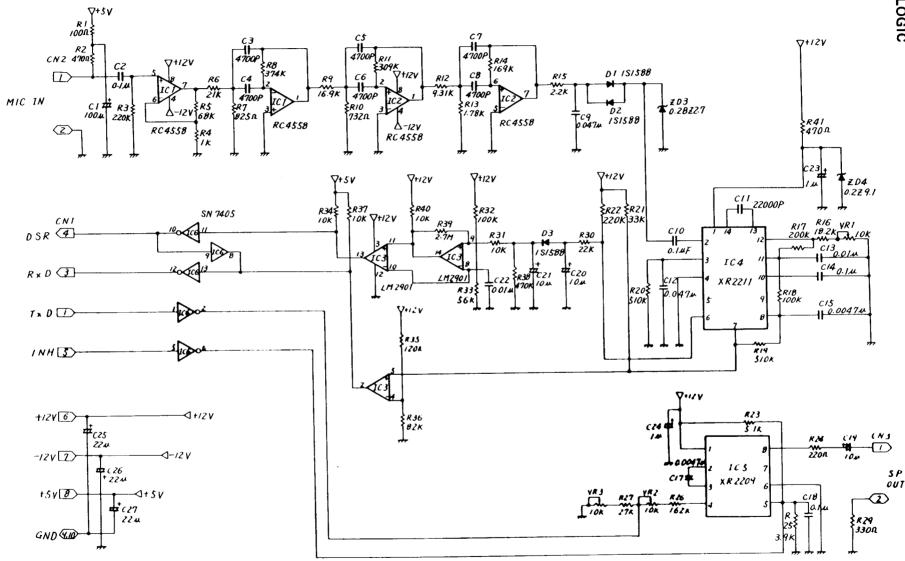

A CONTRACTOR OF THE PARTY OF TH

#### **IMPORTANT INFORMATION**

"This equipment generates and uses radio frequency energy and if not installed and used properly, that is, in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception. It has been type tested and found to comply with the limits for a Class B computing device in accordance with the specifications in Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a pariticular installation. If this equipment does cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient the receiving antenna
- relocate the computer with respect to the receiver
- move the computer away from the receiver
- plug the computer into a different outlet so that computer and receiver are on different branch circuits.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet prepared by the Federal Communications Commission helpful:

'How to Identify and Resolve Radio-TV interference Problems'. This booklet is available from the US Government Printing Office, Washington, D.C., 20402, Stock No. 004-000-00345-4"
