

VOICE SYSTEM 4000™

DIGITAL DICTATION SYSTEM

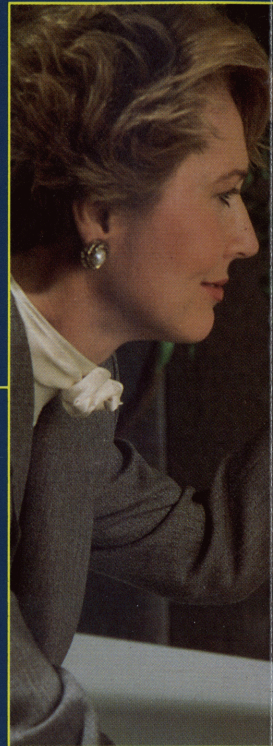

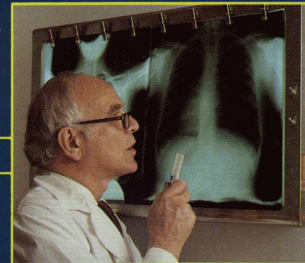

PHILIPS

VOICE SYSTEM

PHYSICIAN BENEFITS:

- User-friendly voice prompts guide authors through recording
- Instant access to diagnostic reports by patient I.D.
- Specify work by type, subject, priorities, I.D., etc.
- Review and edit previous dictations
- Speed control for non-distorted quick listening
- Edit with Insert/Delete/Undo Delete
- Indicate priorities and instructions
- Save dictation for later completion
- Route work via work types or departments
- Authorized review of others' dictation by work type and/or subject number
- Personalized functionality for each user

Immediate access to diagnostic reports is critical to better patient care and organizational efficiency!

GAIN ACCESS TO REPORTS INSTANTLY!

The Philips VOICE SYSTEM 4000 digital dictation system cuts through inconveniences and costly delays to bring diagnostic reporting, dictation and transcription into the digital age.

Now you have immediate access to diagnostic reports via automated tracking. With digitized voice quality and audio headers providing information about each report, you can access reports by patient number, instantly scan for

impressions, and listen to details later. All from any touch tone telephone or dictate station.

Radiologists and other diagnostic personnel no longer need to waste time re-reading reports. Physicians don't have to wait for reports to be transcribed to plan the appropriate treatment. Imagine the time-savings, reduced staff frustration, and *improved patient care* available with the VOICE SYSTEM 4000.

DIGITAL DICTATION CAN'T BE ANY EASIER!

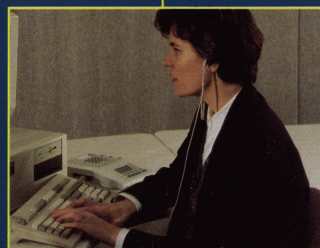

With voice prompts to guide them, physicians will find the sophisticated features of the VOICE

SYSTEM 4000 extraordinarily easy-to-use. Functions such as insert, delete, skip-to-beginning-or-end, and save or code document for priority handling can be implemented instantly. They can even call up to review and/or edit their completed dictations prior to transcription.

Physicians can dictate and review from touch tone telephones and a wide variety of dictate stations. These include microphone and handset style, hands-free and teledictate, in display or non-display versions, with or without bar code input. Each physician can choose the type that is most comfortable.

SEE WHAT IT CAN

SYSTEM 4000™

SUPERVISOR BENEFITS

- Automate work-routing to transcriptionists
- Instantly change work-routing or priorities
- Monitor workflow
- Intercom with authors and/or transcriptionists
- Create and view management reports to measure workloads
- Produce reports for analysis or billing

TRANSCRIPTIONIST BENEFITS:

- Instant skip-through search
- Preview workload via voice or LCD display
- Select priorities
- Speed/Tone control to adjust listening
- Save job for later completion
- Superb sound quality
- Intercom and messaging

CUSTOMIZE FEATURES TO EACH USER

The Philips VOICE SYSTEM 4000 digital dictation system also carries personalization to a new level with individual "custom programmed" features. For example, one physician may choose to listen to reports at an increased, non-distorted speed while another may choose normal speed with voice activation.

Medical transcription has never been easier. With the VOICE SYSTEM 4000's voice prompts and visual/audio document "header cards", transcriptionists have all the information they need. Everything from author name, work type and patient I.D. to dictation length, priority

status and more are available. Transcriptionists can plan their workload accordingly, reducing errors and increasing efficiency.

MANAGE WORKFLOW AND PROVIDE REPORTS

For supervisors, the VOICE SYSTEM 4000's easy-to-use "windows" style management system provides automated work routing or priority handling to appropriate departments or transcriptionists. And supervisors can immediately re-direct or re-prioritize work to handle changing requirements.

Supervisors can produce reports on traffic flow, user performance, dictation/transcription log, departmental usage, system usage, etc. Supervisors can even identify those who have reviewed a report. This lets the supervisor alert the reviewer to listen once again if any report is changed after the initial review.

The Philips VOICE SYSTEM 4000 provides unparalleled capabilities to dictate and review reports for greater organizational efficiency and improved patient care. Your organization will benefit from the enhanced productivity and flexible work flow that automation can bring. And only computerized digital voice technology can offer the instant random access necessary to respond to unexpected changing priorities.

AND DO FOR YOU

SYSTEM
CAPACITY

- 4 to 32 ports - 2 1/2 to 208 hours
- Universal ports for maximum efficiency (No transcription/dictation designation needed)
- Connect unlimited number of remote stations (input or output)
- Up to 10,000 jobs stored on hard disk
