IMPORTANT NOTICE

In these tables of Digital IC-equivalents types have been listed with corresponding equivalents or near-equivalent types applicable for replacement substitute.

A user-oriented selection has been made covering the production programs of 21 manufacturers of Integrated Circuits in Europe, the USA and Japan.

The outline next to this page will show the user of this guide how to read the running titles of the tables.

It is self-evident that in some cases there will be a slight difference - i.e. in dimensions, in dissipations or in any mechanical or electrical characteristics - between the types mentioned in the first column and those mentioned in the columns Europe, America and Japan.

In case of uncertainty it is recommendable to check and compare all characteristics of both substitute and given type by using the manufacturer's own catalogues.

These tables were compiled with the utmost care from the manufacturer's own specifications. The editors therefore cannot assume any responsibility for any inaccuracies in the contents.
