

We have ways...

to make it talk!

Give your computer the magic of speech with an ECHO™ Speech Synthesizer!

There are four new models to choose from: the ECHO 80 (TRS-80 models I & III), ECHO 100 (S-100), the ECHO GP (general-purpose, serial/parallel) and the ECHO SBC (single board computer). These join the popular ECHO II (Apple).

ECHO Speech Synthesizers use LPC synthesis pioneered by Texas Instruments, combined with a phoneme-based operating system to provide any vocabulary you desire while using a minimum of your computer's memory.

The TEXTALKER Speech Generator, standard with all ECHOs except the SBC, translates normal English text to speech automatically.

Simple commands allow you to select from:

- 63 different pitch levels
- Words spoken monotonically or with intonation
- Fast or slow speech output
- Entire words pronounced or spelled letter by letter
- Different volumes
- Spoken punctuation if desired

Speech applications are virtually unlimited, ranging from education to games to aiding the handicapped. The flexibility and low price of ECHO Speech Synthesizers make them the logical choice when adding speech to your system.
