Getting Started with The *Fancy Font*™ System

Follow these directions for a quick introduction to using the *Fancy Font* System:

1. Connect your printer and computer and turn on both machines.

2. Select a CP/M system disk and insert in drive A.

3. Insert Disk 1 of the *Fancy Font* System in drive B.

4. Log to drive B (type underlined characters; ⏎ is *carriage return*)
    A> B:⏎

5. Print a help file for starters:
    B> Pfont Pfont.hlp +fo Romn12⏎
    After several seconds of initialization and processing,
    your printer should start printing a help file in the 12 pt. Roman font.

6. Now an example to show you more *Fancy Font* features, type:
    B> Pfont Sample.ff +fo Romn12 RomnB12 RomnI12⏎

7. Faster, but rough draft printing, can be achieved by typing:
    B> Pfont Sample.ff +fo Romn12 RomnB12 RomnI12 +rd 1⏎

8. Look at the contents of the file 'Sample.ff' with an editor and compare
    with the printed output.

9. Experiment with the file 'Sample.ff' and switching the order of fonts
    in steps 6 & 7, for example:
    B> Pfont Sample.ff +fo RomnI12 Romn12 RomnB12⏎

10. Read the manual and remember to use '?' for help. For example:
    B> Pfont⏎

    . . .
    >> ?

    . . .
    >> +fo Romn12 ?

NOTE: When using Pfont, typing 'Control–C' will *always* stop Pfont and return you to CP/M
