

Contributors to This Issue

R. W. Dixon, A.B., 1958, M.A., 1960, Ph.D., 1964, Harvard University; Bell Laboratories, 1965—. Upon joining Bell Laboratories, Mr. Dixon became concerned with the interaction of light and elastic waves in solids and liquids. He subsequently worked on the development of semiconductor light-emitting diode devices. From 1973 to 1979, he was supervisor of semiconductor lightwave lasers with responsibility for the device aspects of gallium arsenide communications laser development. He has been head of the Optoelectronic Devices Department since 1979.

Satya P. Khanna, B.A. (English), M.S. (Physics), Punjab University, India; M.S. (E.E.) 1963, Ph.D. (E.E.) 1965, Oregon State University; Bell Laboratories, 1966—. Mr. Khanna has worked on vacuum metal deposition and processing of hybrid integrated circuits. Recently he has been involved with new technology development and its implementation in the design of an electret microphone. Member, Sigma Pi Sigma, American Vacuum Society, International Society for Hybrid Microelectronics, IEEE.

R. H. Knerr, B.S.E.E., 1960, Technical University, Aachen, Germany; Dipl. Ing., 1962, National Polytechnical Institute (ENSEEHT), Toulouse, France; Ph.D. (E.E.), 1968, Lehigh University; Bell Laboratories, 1968—. Mr. Knerr has been engaged in R&D on microwave ferrite devices, IMPATT diode amplifiers, bipolar transistor amplifiers, GaAsFET microwave power amplifiers, GaAsFET low-noise amplifiers and microwave receivers. He is presently supervisor of the Optical Components Group at the Allentown, Pennsylvania, Laboratories. Fellow, IEEE.

Ronald L. Remke, B.S.E., 1973, M.S.E., 1973, University of South Florida; Ph.D., 1977, The University of Texas at Austin; Bell Labora-

tories, 1977—. Mr. Remke has studied charge injection and charge movement in polymer electret films. Member, Eta Kappa Nu, Tau Beta Pi, Omicron Delta Kappa, Phi Kappa Phi.

William D. Rummler, B.S. in E.E., 1959, Drexel University; S.M., 1960, E.E., 1961, Sc.D., 1963, Massachusetts Institute of Technology; Bell Laboratories, 1963—. Mr. Rummler was initially concerned with radar signal design and signal processing and associated measurement and estimation problems. He has also worked on single-sideband, long-haul radio systems. More recently, he has been involved with the problems of channel and performance characterization for high-speed digital radio systems. Member, IEEE, Tau Beta Pi, Eta Kappa Nu, Sigma Xi, Phi Kappa Phi.

Takshing Peter Yum, B.S.E.E., 1974, Columbia University; M.S.E.E., 1975, Columbia University; Ph.D., 1978, Columbia University; Bell Laboratories, 1978—. Mr. Yum is currently with the CCIS Engineering and Current Planning Group of the SPC Network System Engineering Center. He is working on the modeling and analysis of the CCIS network, which includes terminal buffer congestion control schemes, routing rules, link engineering, and traffic measurements. Member, Eta Kappa Nu, Sigma Xi, IEEE.
